

MEMORANDUM

To: Randy Elmore
From: Matt Palmer, PE *MJP*
Subject: Red-Light Camera Review, GTC #11-090
Date: October 17, 2011

This memorandum is to address the applicability of a Red-Light Camera for the northbound movement of SR-539 (Guide Meridian Road) at Telegraph Road. The review is based on the most recent five full years of collision data received from the Washington State Department of Transportation (WSDOT) and the City of Bellingham. Also, a professional literature search was conducted to determine the application or potential unforeseen consequence for right-turn on red versus straight through red-light violations.

Matthew Palmer, responsible for this memorandum, is a licensed professional engineer (Civil) in the State of Washington and member of the Washington State section of the Institute of Transportation Engineers ITE.

Base Information

The most severe (costly in both terms of injury and damage) collision type is at angle collisions. At signalized locations with protected left-turn phasing this severity of accident is caused nearly always by through traffic red-light violations. Based on information within the May 2010 ITE Journal article "Effectiveness of Red-light Cameras"; red-light cameras are normally installed after a traffic engineering evaluation shows that all reasonable and applicable engineering countermeasures (i.e. increasing yellow times, improving visibility) have been evaluated and that violations still exist. The reason to conduct such investigation and corrections before resorting to additional enforcement such as red-light cameras is that research has shown that although additional enforcement might reduce the number of potential at angle collisions; it could also increase, rear-end collision frequency.

GTC could not find an engineering evaluation of the subject intersection. The only data GTC found was collected by American Traffic Solutions and was a Violation Incident Monitoring System (VIMS) Site Data Report that identified potential red-light violations at the study intersection. The eight hours worth of data showed a potential of 17 violations in the northbound direction; 6 for the through movement and 11 for right-turns.

Per a study conducted in College Station, Texas, violations per movement type were broken down to: through 50%, right-turn 47%, left-turn 3%. From the ITE Journal article “Effectiveness of Red-light Cameras” there was a decrease in right-angle collisions ranging from 10% to 50% and the rear-end collisions showed an increase range from no significant change to 60% increase. A review of ten before-and-after studies by the Insurance Institute for Highway Safety (IIHS) showed an average 16% reduction to total injury crashes.

Collision Analysis

GTC conducted a review of the collision data provided for all collisions at the intersection of SR-539 and Telegraph Road to determine how many collisions over the last 5-years had the potential to be eliminated by the red-light camera system.

When reviewing the WSDOT and City data for the standard 5 year period there was only one collision identified in the data specifically identified as disregard Stop and Go Light. The rear-end collisions (78) account for 67% of the total collisions, sideswipes (28) account for 24%, at angle (5) make up only 4% of the collisions, the remaining (6) collisions make up the remaining 5%. None of the right-angle or stop light collisions resulted in any injuries.

Using the highest decrease in right-angle and stop light running collisions from the ITE Journal article of 50% there would be a possible reduction of just 3 collisions in a 5 year time frame. However, if just the average increase in rear-end collisions of 30% happens there is the potential for 23 additional rear-end collisions in the same 5 year time frame.

Per the 2009 Washington State Collision Data Summary, the existing accident rate for Urban Principal Arterials in the Northwest Region is 2.19 collisions per MVM. Based on the 5-years of collision data obtained from WSDOT and the City of Bellingham; the collision rate at the intersection of SR-539 at Telegraph Road is below the average accident rate for similar roadways in the Northwest Region. The collision data is summarized below in **Table 1**.

Table 1: 5-Year Collision Rate and Frequency – January 1, 2006 to December 31, 2010

Location	Collision Type							Collision Frequency	ADT	Rate
	Rear End	At Angle	Sideswipe	Disregard Stop Light	Bike/Ped	Other	5-Year Total			
SR-539 at Telegraph Road (WSDOT Data)	46	3	17	1	1	0	68	13.60	49,000	0.76
SR-539 at Telegraph Road (City Data not in WSDOT Data)	32	2	11	---	2	2	49	9.80	49,000	0.55
TOTAL	78	5	28	1	3	2	117	23.40	49,000	1.31

Conclusions

Based on the 5-years of collision data obtained from WSDOT and the City of Bellingham; the collision data does not support the introduction of red-light cameras. Per the ITE collected statistics it only has the potential to reduce at angle red-light running collisions by a less than 1 per year but increase rear ends by an average of nearly 5 per year for this particular intersection.

With no fatalities or injuries related to the at angle collisions but 30 injuries related to rear end collisions it is anticipated that the proposed red-light camera would not reduce the collision/injury potential of the intersection and potentially increase the collision/injury potential at this particular location.
